

PRODUCT CARD

Tagcheck for lifting equipment

Tagcheck is an innovative, cost effective series of tagging systems for plant. It can be incorporated within an Allianz Engineering client's planned in-service inspection programme.

What are the benefits?

- Minimise the potential for accidents by reducing risk of uninspected plant being used.
- Enhances existing Health and Safety procedures.
- Immediate recognition for site staff that equipment has been satisfactorily inspected.
- Markers are clear, durable and waterproof and should not interfere with the operation of equipment.

- Flexible systems which are suitable for a wide range of plant.

Our core tagging systems include:

Coloured tags

- These are coloured tags and sleeves designed for lifting accessories.
- This system is suitable for all inspection intervals.
- The tags are available in 12 different colours, each colour representing a different month. The colour of the tag indicates the month that the next inspection is due. The sleeve states both the month and year of the next inspection.
- Site control notice(s) are provided to show which colour represents

which month, making it clear to site staff when the item of tackle is next due to be examined.

Aluminium discs with dated labels

Ideal for lifting machinery and suitable for all inspection periodicities.

- **Aluminium discs** – these are attached to the item of machinery using a tag made from sustainable Castor Bean.
- **Date label** – a label is applied to the disc each year, indicating the month and year the next inspection is due.

In situations where discs cannot be applied, we are able to offer a dated label solution

- A dated label is applied to the machinery each year, indicating the month and year the next inspection is due.

PRODUCT CARD

In addition to our standard systems, we are also able to provide a variety of bespoke solutions which include:

- **Coloured bands** – suitable for lifting items in the nursing industry such as patient slings. These hard wearing, durable coloured tags can withstand the high temperatures of washing machines as well as being non-abrasive to patients' limbs.
- **Inspection stickers** – Vinyl stickers have the strength and durability to be used on some pressure plant. They can also be used as an alternative sticker option for lifting equipment.
- **Coloured wired tags** – suited to arduous environments such as quarries and construction sites.
