Fire suppression solutions for electric cabinets, fuse boxes and sockets

From ACT by FES

Innovative fire suppression stickers and cords able to automatically extinguish fires in sockets, electric fuse boxes and closed cabinets of up to 2,000 litres capacity.

For every million people in England, there were 4.7 fire related fatalities in 2016/17.*

Your Special Offer

As an Allianz customer, you'll receive:

- A free visit by an ACT approved installer to assess the areas to be protected and provide a quote
- A 33% discount on the market price of Pyrosticker and Pyrocord fire suppression products.

Product Range

We've partnered with ACT by FES, to provide a new innovative technology solution, using breakthrough developments in nanotechnology to encapsulate a fire extinguishing agent in the format of a sticker and a cord.

In the event of a fire, the extinguishing agent is automatically released from the sticker or cord, fighting the fire at source, limiting the potential damage and preventing fire spread.

The extinguishing agent will not damage the protected equipment, and is environmentally friendly having zero ozone depletion potential.

Pyrosticker

Pyrosticker is a flexible sheet of composite fire suppressing material designed for use in residential, commercial and industrial premises. Once installed, it is fully autonomous and does not require any further action.

- Small stickers containing microcapsules of fire extinguishing agent
- To be installed in closed units of up to 60 litres capacity (e.g. fuse boxes, junction boxes, plug sockets)
- In the event of a fire, the microcapsules burst, discharging the extinguishing agent
- Simple installation by sticking at the top of the enclosed space. Can easily be retrofitted.
- The microcapsules remain fully operational for a certified period of five years following installation.

Pyrocord

Pyrocord is an innovative composite cord comprising fire suppressing microcapsules, and like the Pyrosticker, offers a fully autonomous solution, requiring no further action once installed.

- Can protect server boxes and cabinets, up to 2,000 litres capacity, and operate in temperatures ranging from -50C to +80C
- Suppression of electrical fires directly at their source
- Easy installation that is not invasive and can be retrofitted
- No maintenance needed for Five years from installation.
