

Safety Barriers and Bollards

From A-SAFE

Safety barriers are an effective way of protecting and safeguarding employees, essential equipment, buildings and structures from workplace accidents and damage from vehicle traffic.

For example, safety barriers provide complete pedestrian segregation from workplace vehicles. In the event a driver loses control the polymer barriers will absorb and dissipate the impact energy along the rails and posts.

Approximately 50 people are killed each year and more than 5,000 injured in accidents involving workplace transport in the UK.*

Your Special Offer

As an Allianz customer, you can:

- receive an exclusive **10% discount** on our preferred supplier's products and 10% on all parts in respect of servicing
- enjoy **discounted products** from a world-leader in workplace protection, including traffic and pedestrian segregation; building and equipment protection; corridor and wall protection; and car park protection
- get a **complete nationwide service** – expert installation and surveying teams to help equip your facility with the highest standard in workplace safety solutions.

Product Range

Our preferred supplier, A-SAFE, manufacture, install and service a range of fixed barriers, bollards, and protectors, designed to protect clients across a range of industries and sectors.

All A-SAFE products are tested and verified by TUV, a leading inspection and product certification specialist.

They're also fully compliant with the British Standard PAS 13:2107 Code of Practice for Safety Barriers used in Traffic Management within the Workplace Environment, and come with the reassurance of having the highest performance testing in the market.

A-SAFE products include:

Barriers – a range of pedestrian, traffic, high-level, kerb, rack-end, rack uprights and car park barriers, designed to segregate pedestrians, define walkways, prevent damage from impacting vehicles, and dangerous toppling.

Bollards – a fixed bollard system designed to protect structures and equipment from impact damage, and provide a robust physical presence to prevent access or guide vehicles and pedestrians.

Protectors – rack leg protectors defend vulnerable racking uprights by absorbing impacts and preventing damage that can compromise the integrity of an entire racking structure.

Guards – a range of column and wall guards, designed to protect vulnerable columns, building supports, structures, and walls from vehicle collisions and impacts at higher levels from taller hand propelled machinery.

Plates – a range of dock rollers and trailer plates, designed for zones where maintaining a length of barrier is essential for segregation and protection purposes, and to bridge the gap between HGVs and the loading zone floor, ensuring an even and supported surface.
