

Allianz Insurance plc

Allianz Specialist Inspection Services

From Allianz Engineering Inspection Services

Allianz Engineering can provide a portfolio of one-off inspections, as well as bespoke consultations, helping you to meet the complex demands associated with machinery and plant.

From initial enquiry to service delivery can be as quick as 48 hours.*

Your Special Offer

As an Allianz customer, you can access preferential rates on our engineering consultancy services, which provide you with the following benefits:

- bespoke solutions in a wide range of areas delivered by one of our 560 qualified Engineer Surveyors
- fully independent and impartial advice from one of the UK's leading engineering insurance and inspection providers.

Product Range

We have a dedicated Specialist Inspection Services team that provides bespoke solutions tailored to customers individual needs. This provides a one-stop-shop solution for health and safety requirements. Our knowledge and technical expertise can play a vital role in strengthening in-house risk management services.

We can deliver technical advice, guidance and services in the following areas:

Air Conditioning Energy Inspections

All air conditioning systems with a cooling capacity over 12kW need to have a survey completed, according to The Energy Performance of Building Regulations (2007). This includes an assessment of the efficiency of the system, a review of the system sizing compared with the building requirements and recommendations for improvements, replacements and alternative solutions.

*Dependant on agreeing the contract and availability of both parties.

Allianz 

A wide range of bespoke specialist inspection services in the areas of electrical, environmental, non destructive testing, pressure, lifts and more.

Electrical Inspections

The Electricity at Work Regulations require that an electrical installation should be maintained in a safe condition to prevent danger. We are able to offer a variety of solutions, including fixed wiring examinations, portable appliance testing (PAT), emergency lighting and thermal imaging.

Lifting Plant

Our skilled engineer surveyors offer a comprehensive suite of inspection and consultancy services in support of the Lifting Operations and Lifting Equipment Regulations 1998 (LOLER) and the Provision and Use of Work Equipment Regulations 1998 (PUWER).

Services include:

- thorough examinations
- prior to purchase inspections
- inspections following repairs
- incident investigations
- Tagcheck – a tagging system which enables you to see when the item has been inspected.

Non-Destructive Testing (NDT)

Our panel of skilled and experienced NDT technicians offer a wide range of NDT solutions to meet our clients needs. NDT is a process of inspecting, testing and evaluating the strength of parts without interrupting their use.

This process may support the thorough examination or inspection of an item of plant, or to assist with their maintenance and condition monitoring programmes.

Pressure Plant

Our comprehensive range of specialist pressure plant inspections and consultancy services covers the life cycle of pressure equipment, such as cafe boilers and pressure vessels.

Training

Employers are becoming increasingly aware of their responsibility to ensure that their staff are suitably informed about statutory workplace inspection regulations. We are able to offer a suite of client-specific training options, which can be delivered at your premises.
